Knowhow inclusive: Demo services for surface treatment

Developing individual solutions with free advice on site

Material, workpiece, range of applications: surface treatment depends on many factors. Crucial are the right machine, the right speed, the optimal abrasives, and the best procedure.

SUHNER supports you in this with special demo services.

SUHNER provides the whole range of abrasives and equipment with a unique diversity of drive types – electric, compressed air, flexible shafts, and battery.

The company set up its demo services for users to achieve the best results for their individual needs:

An experienced technical consultant visits the user on site where together they develop the solution tailored precisely to the user's challenges without departing from the standardised methods.

For these free onsite services, our experienced technical consultants are equipped with all of the conventional machines, tools, and abrasives. The user can then try out the various products directly on an actual workpiece. This brings to bear all of the technical and economic benefits embodied by our end-to-end solutions.

The subjects can include, for instance, how to choose abrasives for attaining the best finish, how to reduce tool weights for the same machine performance by skilfully combining components, and how to eliminate whole cycles of operations with highly refined end-to-end solutions.

To this end, both users and experienced consultants work hand in hand in developing optimal solutions for the full utilisation of savings potential.

The ergonomic design of SUHNER machines and their high performance-to-weight ratios help to reduce fatigue symptoms for better personnel health.

SUHNER demo services

Whether electric, compressed air, flexible shafts, or battery:
The SUHNER concept offers machines fitted with all of the conventional drive types. Our demo service consultants describe how the various products are used and elaborate individual solutions for the user's practical needs.
