

Press release

Suhner Abrasive Expert pneumatic tools guarantee optimal results for industrial and handcraft applications. Experience and expertise since 1914.

Working on air!

Suhner Abrasive Expert has been focusing on the customer for a hundred years now. The quality and precision of the tools and components it develops itself enjoy international acclaim.

Suhner also sets international quality standards in the fields of specialised tools for the creation of value in industrial and handcraft applications. Its latest development is a new generation of pneumatic tools that present an extremely compact design, continuing the resounding success of the product range.

Complex grinding tasks find their optimal solution in suitable tools connected to the virtually ubiquitous compressed air supply system, whether for machine, tool, and mould building; aerospace applications; foundries; or general assembly work. This demands high performance and economical air consumption, and Suhner Abrasive Expert plays its trump card in the form of the new pneumatic generation. All new pneumatic tools feature an exhaust air guide directed to the back, combined with a safety lever valve and optimal silencer.

New pneumatic generation in detail

The compact, powerful, yet low noise angle and straight grinders are the perfect solution for work virtually free of vibrations, including deburring and light chamfering in aircraft construction, lightweight engineering, and mould building, as well as arts and crafts. The flexible bearing takes the fatigue out of work with formed abrasives or carbide cutters. Specially developed long neck straight grinders are ideal for sites difficult to access, especially on deep geometries. All new pneumatic tools benefit from the integrated centrifugal governor that maintains a constant working speed even under load, for less air consumption.

Test us!

You can count on our advice for process oriented and cost effective work on your workpieces. Trained SUHNER personnel can assist you in finding solutions for your applications. Test us!
